Hi Wayne, I've often wondered why people ask if they can change your carefully thought out designs, and now I'm doing it too. I have a pair of beyma cp380m 1in compression drivers and a pair of cabinets a bit larger in volume than the 4pi but only wide enough for a 12 in woofer. Could you send me the plans for the 3pi? I will build the xo as per plans unless you have any advice as to mods for the Beyma. I don't expect a re-work, just thought you may have tried them. Thank you for your patience. regards Randy
