Hy Wayne . has you tried to buy china made woofers I said this because the state of the art in loudspeaker manufacturing has rocket up from those days when late Mr .Robert Angus editor of Audio magazine made a trip interview 30 years ago (1978) .In those incipient audio china days I was skeptical that China could start a loudspeaker and electronics race against those giants USA audio firms .Now time has show that Chinese people (with USA how now) could rise the bar instance see the robust Eminence Kappalite 3015LF with Chinese riots of course , What a woofer .
