Wayne, appreciate the pauper's alternative. May I ensure that I understand this idea correctly? Here's the idea: a Pioneer M-25 power amp 120W per channel (http://www.silverpioneer.netfirms.com/m25_amplifier.htm), each channel feeding into Pyle active X/Os, each which control a subwoofer. I have a Parts Express cart full of Pi7 drivers ,etc. and would like to complete the order with two recommended subwoofer drivers and the crossovers. If anyone can recommend subwoofers from PE and some cabinet plans, I'd be very grateful. I will build the subwoofer cabinets myself. There are so many designs out there, but I'd like a design optimised for my specific situation. I will build Pi7 with JBL 2226H. The dedicated, acoustically treated listening room dimensions are 6m (20') X 3.8m (12.36') X 2.3m (7.64'). Link to room: <http://www.audiokarma.org/forums/showthread.php?t=183941&highlight=dedicated>
