Good moornig, Wayne. I'm considering the opportunity of bi-amping my Theater 4 (my 300b set for the PSD2002 and a solid state amp for the Delta 15). Have I remove the whole passive filter or I have to add some equalization network?The active Xover probaby would be built with tis project:<http://sound.westhost.com/project81.htm>With a 12 db slope for the compression driver, have I change the crossing frequency (higher)?Many many thanks in advance,Vincenzo
