Good moornig, Wayne. I'm considering the opportunity of bi-amping my Theater 4 (my 300b set for the PSD2002 and a solid state amp for the Delta 15). Have I remove the whole passive filter or I have to add some equalization network? The active Xover probaby would be built with tis project: http://sound.westhost.com/project81.htmWith a 12 db slope for the compression driver, have I change the crossing frequency (higher)? Many many thanks in advance, Vincenzo
