I didn't have immediate plans to get a new soundcard... esp.7.1 What would I use it with? The Aardvark cards and such are out of my price range...but I always had a yen to get a breakout box rig from Hercules or Creative. Those never come down much in price. Problem with webstreams is it's difficult to know where to start. My current browser doesn't support Netscape Radio which gave good variety. Going to load WUSC and see what happens...Linux works a bit as of this afternoon... not on it now though.
