Other symptoms are:Inability to face realityUnquenchable desire to spend other people's moneyPoor memoryInability to reasonclosed eyesThese symptoms alone with the inability to read are definite symptoms of liberalism. But don't worry, there's help. People thus stricken with this horrible disease have shown improvement when given healthy doses of the truth. Most can never be cured completely and will need continued therapy for the rest of their lives. But in some rare instances the eyes of the stricken can eventually start to open and see the light.
