Hi Fred,I found this subject discussed on the web. See link below. One of the posters on the forum suggests this. I use Norton but have not had the problem. Hope this helps.Open Norton Protection CenterClick on Norton AntiVirus tab at topExpand "Settings" and scroll down to bottom for Additional Options -> Virus and Spyware Protection OptionsOn the left-hand side of the screen that pops up, click on General Settings under Manual ScanningUncheck the second item, which should be "Scan active programs and start-up files"Again, on the left-hand side, click on General Settings under LiveUpdateUncheck the second box there, too. It should be "Run quick scan whenever protection updates have been received"
