The only electronics I ever diy'd was a Heathkit AR2020 back in the late 70's, and a Hafler amp in the early 80's. SS, still have the heathkit. Lots of xovers and such but no tube or serious hifi since then. Time to start however. I have an old heathkit tube integrated from my father in law he built in 54 or 55 that I think I'll revamp once I build some of Wayne's 7pi's. Woodworking, old cars, and old house(more than a hobby) have been the main hobbies for quite a while. Your tube discussions on other forums here leave me in the dust. Not much on theory anymore, but give me a schematic and I can probably build it, point to point anyway. I tried making a pc board once . Maybe it's easier now.
