This summer bodes well for sci-fi fans. Plenty of pulse pounding pyrotechnics. And a couple here that may give more to ponder. MOON, starring Sam Rockwell and directed by David Bowie's son could be very interesting. A lone miner confronts his double near the end of his 3 yr. assignment alone on the far side of the moon. http://www.sonypictures.com/classics/moon/trailer.html . And one that to me looks very interesting called DISTRICT 9. Aliens are marooned here on planet earth, in Africa, in Johannesburg and subjected to apartheid conditions. A rotten multinational company controls their lives. http://www.d-9.com/ . There is an unpixalated version of the creature being interrogated also on the net. Good stuff maynard.
