I was looking through the buyouts at PE and ran across this (#299-258)

the idea is a 72" overall line length with all drivers on a 6.5" c-c spacing using the JBL PT series 50 x 90 WG with an acoustic crossover point ~1.5-2kHz

The enclosure and tuning are meant for use with AVR bass management 80-120 Hz HPF for HT use

Baffle would be 7' x 14.5" hw with 1.25" roundovers on the verticals. Woofers would be off set 1.25"
