I'd like to add one thing based on your description of your space. My Pi 4's are one of the best speakers I've ever listened to outside the room they're in. It's hard to describe, but I'll put them on in the living room, not too loud, and they fill my whole downstairs with nice music, and on good recordings, it sounds very much like there's someone in there playing piano or guitar or whatever. Somehow the phasing and reverb, etc. just works very well. So if you might be listening from the adjoining areas, this may be an additional benefit. Mine are built out of plywood, but finished with a dark faux "varnished mahogany" look. No digital camera, or I'd post a pic. Good luck!
