Wayne, I am fascinated with your speaker designs and I'm looking forward to pairing a set of your 2 Pi towers with my Bottlehead S.E.X. amplifier.

Could I please get a set of plans for the 2 Pi towers? I've got a friend who may be willing to tackle the woodworking portion of this project for me, and he'd like to see the plans before committing.

Once built I'm sure I'll have a bunch of questions on placement and god knows what. The room I listen in really stinks for music, but I don't have much choice in placement. It's half music half home theater, with the speakers on either side of my television stand about 6 feet apart. One of the speakers has a (mostly glass) door behind it and the other has a window. Not ideal but the way my living room is set up it's all I got.

Thanks so much and I'll be ordering the kits soon as long as my buddy says he'll do the cabs.

Rich
