Hi all. I've been going through my stash of boards and such that I never got around to building, and decided to let them go. Shipping within the CONUS only at $5 per package. Order all of them and it's only $5 for the shipping for everything. Payment by USPS money order only. I do not accept Paypal anymore.

I've got two CKIII boards with a pair of matched 2SK170BL/2SK74BL JFET's for each board. JFET's come with board ($20 each) http://www.amb.org/audio/ck2/:

One Millett MAX board ($18) http://www.diyforums.org/MAX/MAXoverview.php:

Two Millett Hybrid rev2 boards ($12 each)http://www.diyforums.org/millett.html :

One populated diamond buffer for the MH rev2 boards built by Steinchen using BD137/BD138 output transistors (never used---$25)http://www.diamondstar.de/dDB_overview.html:
