---

i got the drivers from fred thompson, eminence drivers, psd2002 and delta 12lfa.  
for crossover, dayton resistors, jantzen crosscaps, jantzen air wound coils, 14g for the one in series with woofer and 18g for the others.

put the box next to the 1pi towers just to get an idea of size and snapped a pic. just a little bit bigger

i made the box just a bit taller, narrower and deeper.

34" tall, 15" wide, 17.5" deep, 3.88cf.

it's been raining almost everyday since i started working on these things so they're just kinda sitting for now, crossover parts should be here today but it's my birthday so no work will be getting done tonight...
