Do you mean 'why would I want to use them'? If so, it's because I found some cheaper 4"x6" full range drivers. They look pretty good.

Would there be any issues with that size? I'm assuming they'd be fine, but this will be my first venture into the line arrays so I would like to keep it cheap as a trial project.

Marlboro, I saw your line array a few days ago while searching around. It looks very nice.

I appreciate any thoughts you have on the 4"x6" drivers.
