Marlboro wrote on Thu, 24 September 2009 18:18FR is +/- 2 db from about 80hz to 8500hz That would be an awesome candidate if it really holds up to that graph. But, the Madisound page says - "Suggested box: 2 to 5 liters sealed and stuffed for an F3 of about 125Hz"

Wouldn't that suggest a crossover point around ~200-250Hz?

Any ideas how would that affect bass integration?
