I find it refreshing to see unsmoothed response curves posted, in addition to the more common highly smoothed charts. Showing response curves unsmoothed, as well as with 1/6th octave and 1/3rd octave processing is informative. I know a lot of people are used to seeing 1/3rd octave charts so when they see an unprocessed chart, they don't have a basis of comparison. Just about everything looks good with 1/3rd octave smoothing.
