Subject: Ten Dollar Line Array

I've ordered the Parts Express 200 tweeter buyout, and I'm planning to build a pair of line arrays, each with 100 of these drivers running full range above 200hz. I plan to boost the response from 200hz to about 3khz. I'll use a subwoofer below 200hz. I know somebody will tell me this isn't going to work, but I checked Dr Griffin's line array bible, and it says the ctc spacing is ok.
