Sounds like the kind of "put together" projects that were available in the Allied Radio Catalog back in the 1950's. I can still remember the smell of the paper. My uncle was a professor of electrical engineering at UMASS. He left some job where he was making \$20000 a year in 1954 for GE in Philly, to take the assistant professorship at about \$1900, in Amherst. He had all these catalogs to drool over, and later I used to drool over Heathkit.

Also sounds like the stuff my nuclear physicist son used to put together, though way more simple, of course.
