Hi Wayne,

I see your great work on this cab, the spl plot is amazing.

I've some question about the cooling. The plate metal panel it's a great idea and plug too..but...are there some DIY option?

If I use a wood panel is heat too much for the driver?

Could you send me the plans? I want to make some simulation in akabak to get some plot about different way of stacking.

cheers, bitzo
