Subject: 12pi sub simmed on akabak Posted by bitzo on Sun, 15 Nov 2009 18:35:51 GMT View Forum Message <> Reply to Message

Hi all,

thanks to Wayne for sending me the 12pi plan.

I'm trying to sim this cab in akabak. But I have some question.

One driver fire in the throat chamber the other one in the rear chamber, but both driver are connected in parallel.

So I substract all the driver volume from the throat chamber and I add the cone volume to the rear chamber.

For the other driver I added the cone volume to the throat chamber and substract all the driver volume from the rear chamber.

Am I right?

cheers, bitzo
