Subject: Cornerhorn possibility?

I have a access to a set of Yorkville U15's with a Danley designed 60x60 Unity horn for mid and high http://www.yorkville.com/products.asp?type=29&cat=38&id=254. I was wondering if it would be worth trying to use the unity horn section from the U15s in place of the specified high and mid horns on the 7pi? What issues would I run into?

The mids are high passed at 350hz to the 15" driver. I see three possibilities:

1. Get rid of the U15's bass driver and use the existing 2226.
2. Swap the U15s bass driver for the 2226.
3. Use the existing U15 enclosure, placing it on top of the cornerhorn with the U15's bass section on top of the unity horn. I'm not sure how well the U15 bass driver would integrate with the 2226.

This is just a crazy idea I got so it could be completely off base. If this does not adhere to the spirit of this forum, please disregard.
