Hello again,

A few months ago I discovered this site "www.prodance.cz", (some of you may be familiar with it already). Its a Slovakian site and provides test results for a large number of Pro drivers. Click on the English box, then go to the "MLSSA Data" box at the top.

Not having been there for a while, I discovered they have added the Alpha-8 and 10, as well as the other units in the Pi range. What it shows is that the 10 has a somewhat smoother frequency response and cleaner "waterfall". Which may be "another" reason for the preference for the "10" over the "8" shown in the previous replies. Its interesting that the larger cone seems to offer a better controlled result!?

Roy
