Still having fun experimenting with various speakers to mate w/my 2226's. I have been toying with the idea of building an 800hz 3-pole Butterworth crossover (ala Steve Bench) and use it with 2226 on the bottom and 500hz Edgar horn on top (w/GPA 299). Anyone have thoughts on how well this might work? Obviously the top will need to be attenuated. Any speaker level eq still needed? I think this ends up being an 18db slope - okay or is a steeper slope better?
