To everyone:

I never saw Star Trek "Nemesis" (was too freakin' busy at the time it came out). But I saw it in a discount bin for $5, today.

I tried searching here for reviews but didn't really find much. One comment by Wayne sounded promising. So...

1) Is it worth $5 for the quality of the movie itself (storyline, etc.)?

2) Failing the above, are there good action sequences that would make for good Home Theater demo material, and is the audio and video quality good?

3) Etc.?

I've not been around much recently (another really busy period!) Will try to get back again with something half-way useful to say, sooner, next time!

Thanks!
