CZ Eddie wrote on Sat, 13 March 2010 21:40 Why not use 3/4" MDF @ \$25/sheet and then use veneer to cover it?

The downside to MDF is weight and strength. I move every three years, with possible move to Egypt or Peru in 18 mths, so MDF is to "brittle" for my needs.

I used the 11-ply for my subwoofer build and it was very good quality, much higher than what I could find at Lowes or Home Depot. I may go with it again so that I can stain to match tyhe subwoofer. The owner of the store where I buy my plywood (Hardwoods, Inc [<http://hardwoodsincorporated.com/plywood.aspx>]) recommended the 11-ply due to the huge discount over the 13-ply.
