Hello to all. First post here, great forum too. Trying to use Horn resp (first attempt) to model a B&C 8 PE 21 8" mid-range driver and trying to figure out if I have this thing somewhat right. Here's what I have so far. Input parameters.

And the spl response

I'm looking to cover 200 to 2000 hz. This looks almost too good to be true. What am I doing wrong here?
