Wayne,

Thank you for the recommendation. Could be the 4Pi then built directly with components I already have (2225h/2425h/2370A) or shall I modify your crossover/recommended box size in some way?

How much of the quality will I lose against the combination you use (2226/DE250/H270)? Which is the most problematic component in my set?

Thank you in advance,
Vlad
