I have an AbraxasAudio 12B4 SET amp for sale.

Built by Jef Larson of AbraxasAudio in 2006 for the Great Plains Audio Fest in Tulsa that year. This is actually his #2 12B4 amp, but he didn't have time to take pics before the show, and so isn't shown on his website below. There are a couple of pics of it in the GPAF archives here on ART.

Specs:

12B4 output tubes

12AX7 driver

0.9W output power

Integrated with 50K volume pot

Headphone jack -- has worked well with my 60 ohm AKG's and 600 ohm Sennheisers.

There are a couple of nicks/small scuffs on the painted side pieces, but were there when I bought the amp. Jef figured someone did it at the GPAF show.

I currently have been using this amp on a set of ART Arrays with no problems. See Jef's site below for good details of how this amp sounds.

Pics can be seen here: <http://pedalforroses.homestead.com/PowerAmps.html>

More about the 12B4 amps can be read here on Jef's site:
<http://amps.abraxasaudio.net/g-se.html>

Asking \$325.
