Due to unforeseen circumstances, I'm not building the line-array that I began collecting parts for. My lack of time and need for finances (long story) is your gain. Shipping is not included and will be quoted prior to sending these out, at an agreed upon price. Serious inquiries only please.

For sale are sixteen, new in the box, Dayton Audio PT2Cs Planar Tweeters

and thirty-two, new in the box, HiVi B3S (square frame) Shielded 3" Drivers

I would like to sell these all at once, but realize that to be unlikely. Here is the pricing:

All components for \$600, which is nearly \$400 (40%) off retail. This is the best I can do for selling everything at once. I have over \$1,000 invested, and can't take a larger hit.

All tweeters for \$400. These will work well with line arrays using woofers up to 6".

A pair of tweeters for \$60. I don't want to sell these individually at all.

All HiVi B3Ss for \$300. This would make a very nice 48" single driver line array pair in and of itself.

Eight HiVi B3Ss for \$50. I really don't want to break these down any further. These would make for great computer speakers.

Well folks, that's about it for now. Let me know if you have any questions.
