Subject: Socket Splitter Problem
Posted by Lancelot on Thu, 17 Jun 2010 02:41:46 GMT

I placed a socket splitter for my speaker and headphone to produce sound at the same time. The quality of the sound of the speaker became like the sound of the headphone. How can I make the speaker return to its quality before putting the socket splitter? Please correct me about the right term for the socket splitter.

The reason I placed the splitter is because the socket in front of the computer doesn't work. I have to plug in and out the speaker and the headphone at the back of the computer so I decided to buy a splitter.
