Will you paint the brushed edge of the 2226 woofers too?

I think it would be a good plan, any ideas how to pull it off without risking damaging anything?

Just a note about the reflection problems, In the picture I posted above I had to hang some black GOM fabric over the speakers to cut the reflections of the semi-gloss black painted cabinets that were very visible without the fabric covers. I am trying to do everything to avoid adding any additional material between the speakers and the listeners. I know the screen has some attenuation on the upper frequencies that may need some equalization.

This is from the SMX web site, blue line is speaker, the pink is with the screen in place.
