I'm not sure what you said but it sounds complicated. *lol*

I received the speaker and I thought it was rather large so I measured it. It's a 12" speaker not the 10" that it was advertised as. I'm not sure what I'm going to do from here. I think I've found a diagram that matches my chassis. The schematic only shows 2 wires going to the speaker and the picture of the back of the cabinet shows a speaker that doesn't look like it has a transformer on it but it's not a great picture.
