Well hopefully I'll have good luck. Just curious....how much are your xovers for the 4pi with the JBL 15 and B&C CD.

The caps and inductor used in the JBL Xover is surprisingly small..and look cheap. If the horn smooths it out I was thinking of maybe upgrading a few of the components in the Xover to see if it improves the sound even more or buying a xover from you... I realize your's are optimized for the JBL to B&C...so that may mean I have to change the CD too.
