Hi Wayne,

would you mind sending me plans for the 4pi please?

I would like to build a set of these based on some Altec drivers that I have (bass would be either 416-8c or 515-16G) and the horns would be driven by 902-16B´s.

Actually I tend towards using the 515 woofers as so far my experience is that while they don´t go as low as the 416´s they produce a wonderfully clean and structured bass.

I tried a Model 19 like setup with 811B horns. They have some very unique "character" but I think a Pi setup would be smoother and have more "air" due to the shorter and less resonant horn and likely has less beaming in the top octave.

Regards and thanks

Claus
