Our Community would like to stage an event in our local village hall. The hall itself is 100' long and some 40' wide. The ceiling height is about 15'. We have 6 windows around the hall 3' x 6' and we have a problem.

The problem we have is where should we place the speakers so as to create the best sound? Our discussions involve, placing the speakers on the floor, having them fixed at head height and the final suggestion was a mixture of both.

Is there anyone that could help us solve this dilemma?
