No I have not. Sorry but the only medium I will pay money for is Redbook or better. I think it'll stay that way until filter-free 320Kbps Mp3's are available for sale. I have no problem with MP3's though. They usually only start rolling off frequencies past 16K which is my realistic limitation of hearing at a normal listening volume. So the quality considerations are usually a moot point on the high quality stuff. Be very suspect and investigate thoroughly before buying anything lower than 256Kbps. Older albums are usually okay though because the master tapes usually didn't pick up the frequencies that MP3's sweep out.
