From what I have read, the iPod can play mp3 and wav formats of music, and Walmart sells mp3. Don't know if Walmart still sells the wav format, which is a format you can use to record on CDs and play them on your CD player. I think because of copyright issues they switched to mp3 only. Doing price comparisons, Walmart has been cheaper than Amazon.com. For a single that has just hit the charts you can expect to pay $1.24. After a few months, the price may drop to .99 for that song.
