I can remember when DVD was the future of movies and I was just getting into enjoying my video CDs! Whew! We really have come a long way!

Blu-Ray is definitely top-notch! I saw a scene of "Batman: The Dark Knight" on Blu-Ray - I'll tell you, it was so good I felt like I was seeing this inside a movie theater! I just happened to pass by on a video store!

The problem is it's still too expensive for the average buyer. That's why I still love DVDs!
