Subject: Re: 4 pi with alternate compression drivers Posted by dryfly_6x on Sun, 23 Jan 2011 19:44:57 GMT View Forum Message <> Reply to Message

Hi Wayne:

been studying the plans /crossover and have a few questions: any need to recess drivers? any strong preference between mdf and baltic birch for cabinets?

I assume from the 3rd order topology that the crossover is something close to a LR4. is this to reduce sensitivity to driver acoustic center offsets? Thanks
