This is an interesting thread. I'm most curious about the 5.2 set up. Frankly it's my first time to hear about it. I'm familiar with the 5.1, wherein the audio inputs from the player are fed to the subwoofer. The subwoofer then distributes audio output to the 5 speakers.

In a 5.2 set up, how are the connections done? Secondly, is this something you assemble yourself? or is this something available in the market for people to buy for their homes?
