Nope. If you have a modern flatscreen TV with a RGB input, you are good to go. It will be identical to the signal a CPU monitor would receive.

You may have to play around with the display settings to get the right dimensions and all, which you'll only have to do once, but it will be excellent technically.

A simple 1/4" to 1/4" inch adapter should connect the sound properly.

Edit: In other words, flatscreens are just huge computer monitors.
