---

When cds first starting coming out, I was always nervous about holding them, because I knew that if you scratched it in the wrong place, it might not work right again.

I'm not so clear though on whether it matters how you hold it. For the longest time, I thought that the inner circle held all the information, so I'd never hold it that way. Other people have told me that cds are very resilient and that I shouldn't worry about how I hold it.

What is correct?
