steve f wrote on Wed, 02 March 2011 13:11Roy,

One problem I've noticed with the B-G is every vendor advertises different efficiency ratings.
Steve

Danny Ritchie has included links to frequency response curves and other data for the Neo 3 standard and PDR versions. I noticed the sensitivity of the PDR is listed as 93.5dB (2.83V/1M) with the back cup in place, and 90.5dB in dipole mode.
