I've read from your previous posts that the Fours are 3 dB more efficient and I definitely need that when using my 45 and 2A3 amps. I was just waffling a little bit because I was so intrigued of maybe trying the smaller, faster 12" AE and comparing it to the 15" in my Altec 19s.

With that being said, I think I'll opt for the model Fours.

Thanks Wayne.
