as speakers come - very efficient and benign with respect to impedance load. Seriously, there are few other speakers that are as easy to drive.

This back-EMF thing has actually been a topic of several discussions, a particular focus of mine many years ago. It's a big issue for tube amps, and it's one of the things that my loudspeakers are particularly good at. Look back through the links from my earlier post, if you're interested. Seriously, we've got this covered.
