What is the difference, if any, between a JBL 2226H and 2226J? Which one is the "right" one?

Is the "wave guide" (please don't eat me alive) for the tweeter on the Four- Pi available from commercial vendors or made to your specs? I am in Denmark.

What happens (both the good and bad) when you add a super tweeter on the top of the box? Will it help my dog appreciate music better? Or me? I suspect it requires a new or another cross-over, correct?
