---

Hi Wayne, I have limited height for speakers. Max height I can accommodate is 24". I can go up to 40" wide and up to 16" deep but can only go 24" high. I am looking at doing the JBL 2226 and B&C 250 components. I could keep similar interior volume at 24" high x 20" wide x 14" deep.

Would this affect the Xo design any?

Any benefits going even wider? Thanks!
