---

I will be gluing the front baffle on this weekend. Since I have doubled the thickness of the baffle from 0.75" to 1.5" I made the port exactly 0.75" shorter - thus the overall length from the front of the baffle to the end of the port is 10" (as in the original plan).

Is this correct or are there other factors at play that I failed to take into account?

Thanks,

---
